DETAILED ACTION

Continued Prosecution Application

1. The request filed on 28 January 2002 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) as a Divisional Application based on parent Application No. 09/533,029 is acceptable and a CPA has been established. An action on the CPA follows.
2. Claims 17-36 are pending in the instant application.

Election/Restrictions

3. **Applicant is required to elect** one nucleic acid sequence and one encoded amino acid sequence (e.g. SEQ ID Nos. 17 and 18) to be examined in conjunction with the claims. The Patent and Trademark Office recently published its policy for the examination of patent applications that claim large numbers of nucleotide sequences in the Official Gazette, 1192 O.G. 68 (November 19, 1996). Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. § 121. Absent evidence to the contrary, each such nucleotide is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. § 121 and 37 CFR § 1.141. In addition, a transgenic plant comprising a distinct polynucleotide, to which the instant claims are drawn, is compositionally, structurally and functionally distinct from a plant comprising a different polynucleotide. In establishing the new policy, the Commissioner has partially waived the requirements of

Art Unit: 1638

37 CFR § 1.141et seq. and permits a reasonable number of such nucleotide sequences to be claimed in a single application. It has been determined that normally ten sequences constitute a reasonable number for examination purposes. The Official Gazette Notice of November 19, 1996 is one that permits the examiner to waive restriction to no more than one invention. Since 1996, databases and resource allocations at the PTO have changed and the examination of 10 sequences on the merits in the instant application would present a burden on PTO resources.

Additionally, it is noted that one nucleotide and one amino acid sequence is within the O.G. notice range of "up to ten" sequences. This election is not to be construed as an election of species.

4. Because these inventions are distinct for the reasons given above and because the search required for one of the nucleotide sequences is not required for another, restriction for examination purposes as indicated is proper. In addition, the search of multiple nucleotide sequences encoding multiple amino acid sequence would pose a substantial burden on the Examiner.

5. Applicant is advised that the reply to this requirement to be complete within one month (not less than 30 days) must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be

accompanied by a request under 37 CFR § 1.48(b) and by the fee required under 37 CFR § 1.17(i).
